Scheme of Learning

Year ②

#MathsEveryoneCan

White Rose Maths

Contents

Welcome

Welcome to the White Rose Maths' new, more detailed schemes of learning for 2018-19.

We have listened to all the feedback over the last 2 years and as a result of this, we have made some changes to our primary schemes. *They are bigger, bolder and more detailed than before.*

The new schemes still have the *same look and feel* as the old ones, but we have tried to provide more detailed guidance. We have worked with enthusiastic and passionate teachers from up and down the country, who are experts in their particular year group, to bring you additional guidance. *These schemes have been written for teachers, by teachers.*

We all believe that every child can succeed in mathematics. Thank you to everyone who has contributed to the work of White Rose Maths. It is only with your help that we can make a difference.

We hope that you find the new schemes of learning helpful. As always, get in touch if you or your school want support with any aspect of teaching maths.

If you have any feedback on any part of our work, do not hesitate to contact us. Follow us on Twitter and Facebook to keep up-to-date with all our latest announcements.

ⓕ White Rose Maths

What's included?

Our schemes include:

- Small steps progression. These show our blocks broken down into smaller steps.

- Small steps guidance. For each small step we provide some brief guidance to help teachers understand the key discussion and teaching points. This guidance has been written for teachers, by teachers.

- A more integrated approach to fluency, reasoning and problem solving.

- Answers to all the problems in our new scheme.

- This year there will also be updated assessments.

- We are also working with Diagnostic Questions to provide questions for every single objective of the National Curriculum.

Teaching notes and examples

Answers to Reasoning Questions

How to use the small steps

We were regularly asked how it is possible to spend so long on particular blocks of content and National Curriculum objectives.

We know that breaking the curriculum down into small manageable steps should help children understand concepts better. Too often, we have noticed that teachers will try and cover too many concepts at once and this can lead to cognitive overload. In our opinion, it is better to follow a small steps approach.

As a result, for each block of content we have provided a "Small Step" breakdown. We recommend that the steps are taught separately and would encourage teachers to spend more time on particular steps if they feel it is necessary. Flexibility has been built into the scheme to allow this to happen.

Teaching notes

Alongside the small steps breakdown, we have provided teachers with some brief notes and guidance to help enhance their teaching of the topic. The "Mathematical Talk" section provides questions to encourage mathematical thinking and reasoning, to dig deeper into concepts.

We have also continued to provide guidance on what varied fluency, reasoning and problem solving should look like.

Assessments

Alongside these overviews, our aim is to provide an assessment for each term's plan. Each assessment will be made up of two parts:

Part 1: Fluency based arithmetic practice

Part 2: Reasoning and problem solving based questions

Teachers can use these assessments to determine gaps in children's knowledge and use them to plan support and intervention strategies.

The assessments have been designed with new KS1 and KS2 SATs in mind.

For each assessment we provide a summary spread sheet so that schools can analyse their own data. We hope to develop a system to allow schools to make comparisons against other schools. Keep a look out for information next year.

16 Here are some cubes.

2 boys receive 8 cubes each.

The rest of the cubes are shared equally between 4 girls.

How many cubes does each girl receive?

Show your method

12 Marla spends $\frac{2}{7}$ of her weekly wage on a £120 bag.

£120

How much does she earn in a week?

Show your method

2 marks

Teaching for Mastery

These overviews are designed to support a mastery approach to teaching and learning and have been designed to support the aims and objectives of the new National Curriculum.

The overviews:

- have number at their heart. A large proportion of time is spent reinforcing number to build competency

- ensure teachers stay in the required key stage and support the ideal of depth before breadth.

- ensure students have the opportunity to stay together as they work through the schemes as a whole group

- provide plenty of opportunities to build reasoning and problem solving elements into the curriculum.

For more guidance on teaching for mastery, visit the NCETM website:

https://www.ncetm.org.uk/resources/47230

Concrete - Pictorial - Abstract

We believe that all children, when introduced to a new concept, should have the opportunity to build competency by taking this approach.

Concrete – children should have the opportunity to use concrete objects and manipulatives to help them understand what they are doing.

Pictorial – alongside this children should use pictorial representations. These representations can then be used to help reason and solve problems.

Abstract – both concrete and pictorial representations should support children's understanding of abstract methods.

Need some CPD to develop this approach? Visit www.whiterosemaths.com for find a course right for you.

Training

White Rose Maths offer a plethora of training courses to help you embed teaching for mastery at your school.

Our popular JIGSAW package consists of five key elements:

- CPA

- Bar Modelling

- Mathematical Talk & Questioning

- Planning for Depth

- Reasoning & Problem Solving
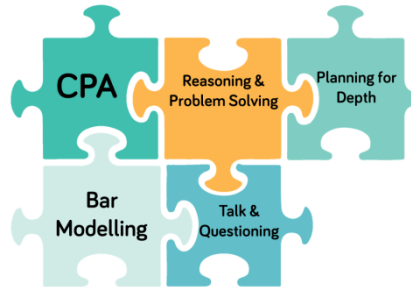

For more information and to book visit our website www.whiterosemaths.com or email us directly at support@whiterosemaths.com

Additional Materials

In addition to our schemes and assessments we have a range of other materials that you may find useful.

KS1 and KS2 Problem Solving Questions

For the last three years, we have provided a range of KS1 and KS2 problem solving questions in the run up to SATs. There are over 200 questions on a variety of different topics and year groups.
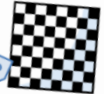

End of Block Assessments

New for 2018 we are providing short end of block assessments for each year group. The assessments help identify any gaps in learning earlier and check that children have grasped concepts at an appropriate level of depth.
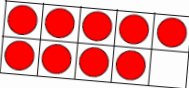

FAQs

If we spend so much time on number work, how can we cover the rest of the curriculum?

Children who have an excellent grasp of number make better mathematicians. Spending longer on mastering key topics will build a child's confidence and help secure understanding. This should mean that less time will need to be spent on other topics.

In addition, schools that have been using these schemes already have used other subjects and topic time to teach and consolidate other areas of the mathematics curriculum.

Should I teach one small step per lesson?

Each small step should be seen as a separate concept that needs teaching. You may find that you need to spend more time on particular concepts. Flexibility has been built into the curriculum model to allow this to happen. This may involve spending more than one lesson on a small step, depending on your class' understanding.

How do I use the fluency, reasoning and problem solving questions?

The questions are designed to be used by the teacher to help them understand the key teaching points that need to be covered. They should be used as inspiration and ideas to help teachers plan carefully structured lessons.

How do I reinforce what children already know if I don't teach a concept again?

The scheme has been designed to give sufficient time for teachers to explore concepts in depth, however we also interleave prior content in new concepts. E.g. when children look at measurement we recommend that there are lots of questions that practice the four operations and fractions. This helps children make links between topics and understand them more deeply. We also recommend that schools look to reinforce number fluency through mental and oral starters or in additional maths time during the day.

Meet the Characters

Children love to learn with characters and our team within the scheme will be sure to get them talking and reasoning about mathematical concepts and ideas. Who's your favourite?
| Teddy | Rosie | Mo | Eva |

| Jack | Whitney | Amir | Dora |

| Alex | Tommy |

	Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8	Week 9	Week 10	Week 11	Week 12

White Rose Maths

Autumn - Block 1

Place Value

Overview

Small Steps

Count objects to 100 and read and write numbers in numerals and words

Represent numbers to 100

Tens and ones with a part-whole model

Tens and ones using addition

Use a place value chart

Compare objects

Compare numbers

Order objects and numbers

Count in 2s, 5s and 10s

Count in 3s

NC Objectives

Read and write numbers to at least 100 in numerals and in words.

Recognise the place value of each digit in a two digit number (tens, ones).

Identify, represent and estimate numbers using different representations including the number line.

Compare and order numbers from 0 up to 100; use <, > and = signs.

Use place value and number facts to solve problems.

Count in steps of 2, 3 and 5 from 0, and in tens from any number, forwards and backwards.

Count Objects to 100

Notes and Guidance

To build on skills learned in Year 1, children need to be able to count objects to 100 in both numerals and words.

Problems should be presented in a variety of ways e.g. numerals, words and images. Variation should challenge children by providing them with missing numbers which are non-consecutive.

Mathematical Talk

How can you count the cars? Do you have a strategy?
What is one more/one less?

Which is the largest number?
Which number is tricky to write in words?

Which numbers sound similar?
How are 17 and 70 different? Can you show me?

Varied Fluency

Count and write the number of cars in the car park.

one		three	four			seven	eight		ten	eleven	
There are _____ cars in the car park.

What numbers are represented below?
Write your answer in numerals and words.
Match the numerals to the words.

17	48	38	70

Thirty-eight	Seventy	Forty-eight	Seventeen

Count Objects to 100

Reasoning and Problem Solving

Jack says he has 61
Is he correct?
Explain your reasoning.

Jack is incorrect.
He has 16 not 61

Here are two sets of objects.
Which are easier to count?
Explain your answer.

The strawberries are easier to count because they are set out on ten frames.

Each jar contains 10 cookies.
How many cookies are there altogether?

Write your answer in numerals and words.

What strategy did you use?

Did your partner use a different method?

What is the best strategy to use?

There are 48 (forty-eight) cookies altogether.

Children may count in 10s and 1s or know that there are 4 tens which are equal to 40 and then count on 8 more.

Represent Numbers

Notes and Guidance

Children need to be able to represent numbers to 100 using a range of concrete materials.

Children should also be able to state how a number is made up. For example, they can express 42 as 4 tens and 2 ones or as 42 ones.

Mathematical Talk

How have the beads been grouped? How does this help you count?

Which part of the resource represents tens/ones?

Which resource do you prefer to use for larger numbers? Which is quickest? Which would take a long time?

Varied Fluency

Here is part of a bead string.

Complete the sentences.
There are _____ tens and _____ ones.
The number is _____.
Represent 45 on a bead string and complete the same sentence stems.

Match the number to the correct representation.
One ten and five ones

Thirty-five

25

Represent 67 in **three different** ways.

White Rose Maths

Represent Numbers

Reasoning and Problem Solving

Where would 36 go on each of the number lines?
One of these images **does not** show 23 Can you explain the mistake?

A   **B**   **C**
C does not show 23, it shows 32 They have reversed the tens and ones.

How many two digit numbers can you make using the digit cards?

7 0 2
What is the largest number?
Prove it by using concrete resources.

What is the smallest number?
Prove it by using concrete resources.

Why can't the 0 be used as a tens number?

70, 20, 72, 27

The largest number is 72

The smallest number is 20

Because it would make a 1 digit number.

Tens and Ones (1)

Notes and Guidance

Children partition numbers and should have an understanding of what each digit represents.

It is important that children can partition numbers in a variety of ways, not just as tens and ones. For example, 58 is made up of 5 tens and 8 ones or 4 tens and 18 ones, or 20 tens and 38 ones, etc.

Mathematical Talk

Which part do we know? How can we use the whole and part to work out the missing part?

Can you use concrete resources/draw something to help you partition?

How can you rearrange the counters to help you count the lemon and strawberry cupcakes?

Varied Fluency

Complete the part-whole models.
Complete the part-whole models.
The ten frames represent lemon and strawberry cupcakes. Draw a part-whole model to show how many cupcakes there are altogether.
Tens and Ones (1)

Reasoning and Problem Solving

Complete each part-whole model in a **different** way.

6 tens and 4 ones

64

64

64

6 tens and 4 ones

6 tens   4 ones

50

64

14

40   24

64
Complete the extended part-whole model.

76

?   ?

30   10

76

40   36

30   10
Tens and Ones (2)

Notes and Guidance

Children continue to use a part-whole model to explore how tens and ones can be partitioned and recombined to make a total.

This small step will focus on using the addition symbol to express numbers to 100. For example, 73 can be written as $70 + 3 = 73$

Mathematical Talk

What clues are there in the calculations? Can we look at the tens number or the ones number to help us?

What number completes the part-whole model?

What is the same and different about the calculations?

What are the key bits of information? Can you draw a diagram to help you?

Varied Fluency

Match the number sentence to the correct number.

| $20 + 19$ | $10 + 4$ | $40 + 0$ | $80 + 1$ |

| 40 | 14 | 81 | 39 |

Complete the part-whole model and write four number sentences to match.

$$\_\_\_ + \_\_\_ = \_\_\_$$
$$\_\_\_ + \_\_\_ = \_\_\_$$
$$\_\_\_ = \_\_\_ + \_\_\_$$
$$\_\_\_ = \_\_\_ + \_\_\_$$
Hattie has 20 sweets and Noah has 15 sweets. Represent the total number of sweets:
- With concrete resources.
- In a part-whole model.
- As a number sentence.

Tens and Ones (2)

Reasoning and Problem Solving

Teddy thinks that,

$40 + 2 = 402$

Explain the mistake he has made.

Can you show the correct answer using concrete resources?

$40 + 2 = 42$
Joel has combined the numbers to make 402.

Fill in the missing numbers.

$$1 \text{ ten} + 3 \text{ ones} = 13$$

$$2 \text{ tens} + \underline{} \text{ ones} = 23$$

$$3 \text{ tens} + 3 \text{ ones} = \underline{}$$

$$\underline{} \text{ tens} + 3 \text{ ones} = 43$$

What would the next number in the pattern be?

$1 \text{ ten} + 3 \text{ ones} = 13$
$2 \text{ tens} + 3 \text{ ones} = 23$
$3 \text{ tens} + 3 \text{ ones} = 33$
$4 \text{ tens} + 3 \text{ ones} = 43$

$5 \text{ tens} + 3 \text{ ones} = 53$

Place Value Charts

Notes and Guidance

Children should formally present their work in the correct place value columns to aid understanding of place value.

It is important for children to use concrete, pictorial and abstract representations in their place value chart.

Mathematical Talk

How many tens are there?

How many ones are there?

What is different about using Base 10 to using place value counters?

Can you write any other number sentences about the place value chart?

Varied Fluency

What number is represented in the place value chart?

Tens	Ones

Complete the place value chart using Base 10 and place value counters to represent the number 56

Tens	Ones

Tens	Ones

What number is represented in the place value chart?

Tens	Ones
9	1

Write two different number sentences for this number.

_____ + _____ = _____

_____ = _____ + _____

25

Place Value Charts

Reasoning and Problem Solving

How many two digit numbers can you make that have the same number of tens and ones?

Show each one on a place value chart.

Tens	Ones

11, 22, 33, 44, 55, 66, 77, 88, 99

Do both place value charts show the same value?

A

Tens	Ones

B

Tens	Ones

What is the same?

What is different?

Yes, they both have the same value of 41

$40 + 1 = 41$

$30 + 11 = 41$

Same: Both A and B show 41

Different: There are a different number of tens and ones in each place value chart.

26

Compare Objects

Notes and Guidance

Comparing objects is introduced once children have a secure understanding of numbers in a place value chart.

Children are expected to compare a variety of objects using the vocabulary 'more than', 'less than' and 'equal to' and the symbols $<, >, =$.

Mathematical Talk

How can you arrange the objects to make them easy to compare?

Do groups of ten help you count? Why?

Do groups of ten help you compare? Why?

Varied Fluency

A packet of sweets contain 10 sweets.

Rosie's sweets   Amir's sweets
Who has the most sweets?

Use cubes to show that:
- Eleven is less than fifteen
- 19 is greater than 9
- 2 tens is equal to 20

Use $<, >$ or $=$ to complete.
Compare Objects

Reasoning and Problem Solving

Rosie and Amir are comparing numbers they have made.
Rosie's number   **Amir's number**
My number is greater because I have more objects.

Is Rosie correct?

Explain your answer.

Rosie is incorrect because Amir has 4 tens which makes 40 and Rosie has 3 tens and 6 ones which makes 36, therefore Amir has more.

Add more Base 10 to make the number shapes and the Base 10 equal.
How much did you add in total to make them equal?

What is the smallest amount you could add if the symbol changed to <?

Children should add 3 tens and 4 ones to make 54 on both sides.

If the symbol changed to < the smallest amount they could add is 3 tens and 5 ones.

Compare Numbers

Notes and Guidance

Children compare numbers using the language greater than, less than, more than, fewer, most, least and equal to.

They are able to use the symbols <, > and = to write number sentences.

Children should have access to concrete resources to help them justify their answers.

Mathematical Talk

Can you prove your answers using concrete resources?

Can you prove your answers by drawing a diagram?

Is there more than one answer?

Do you need to work the number sentences out to decide which is greater?

Varied Fluency

Complete the statements using **more than**, **less than** or **equal to**.

42 is _____ 46

81 is _____ 60 + 4

30 + 8 is _____ thirty-eight

Complete the number sentences.

4 tens and 9 ones > _____

_____ < 70 + 5

_____ = eight tens

Put <, > or = in each circle to make the statements correct.

28 ◯ 30

90 ◯ 70 + 28

30 + 23 ◯ 40 + 13

20 + 14 ◯ 24

White Rose Maths

Compare Numbers

Reasoning and Problem Solving

How many different numbers can go in the box?

$$13 < \boxed{} < 20$$

14, 15, 16, 17, 18, 19

True or False?

One ten and twelve ones is bigger than 2 tens.

Explain how you know.

True
One ten and twelve ones = 22
Two tens = 20

Eva says,
When comparing numbers, the number with the highest number of ones is always the bigger number.

Do you agree?
Give some examples to support your answer.

Disagree, for example 19 is smaller than 21

Order Objects and Numbers

Notes and Guidance

Children order numbers and objects from smallest to greatest or greatest to smallest.

They should be encouraged to use concrete or pictorial representations to prove or check their answers.

Children use the vocabulary 'smallest' and 'greatest' and may also use the < or > symbols to show the order of their numbers.

Mathematical Talk

How does the number line help you order the numbers?

How does Base 10 prove that your order is correct?

Varied Fluency

Circle the numbers 48, 43 and 50 on the number line.

41 42 43 44 45 46 47 48 49 50 51
Put the numbers 48, 43 and 50 in order starting with the smallest.

Use Base 10 to make the numbers sixty, sixteen and twenty-six. Write the numbers in order starting with the greatest number.

The diagrams represent different numbers.
Circle the greatest number.
Circle the smallest number.
Complete the number sentence _____ > _____.

Order Objects and Numbers

Reasoning and Problem Solving

Order the numbers below.
Which would be the fourth number?

33   53   37

29   34   43

Explain how you ordered them.

If I ordered them from smallest to largest:
29, 33, 34, 37, 43, 53
37 would be the fourth number.
Alternatively, if I order the numbers from largest to smallest:
53, 43, 37, 34, 33, 29
34 would be the fourth number.

Mo has written a list of 2-digit numbers.

The digits of each number add up to five. None of the digits are zero.

Can you find all the numbers Mo could have written?

Write the numbers in order from smallest to largest.

What strategy did you use?

14, 23, 32, 41

Count in 2s, 5s and 10s

Notes and Guidance

Children count forwards and backwards in 2s, 5s and 10s. It is important that children do not always start from zero, however they should start on a multiple of 2 or 5 when counting in 2s and 5s but can start from any number when counting in 10s. For example when counting in 2s they should not start at 3.

Encourage children to look for patterns as they count.

Mathematical Talk

What do you notice? Are the numbers getting larger or smaller?

Are the numbers getting bigger or smaller each time? By how many?

Can you spot a pattern?

Why is it the odd one out? Can you correct the mistake?

Varied Fluency

Continue each number sequence.
Circle the odd one out in each number sequence.
- 2, 4, 6, 8, 9, 10, 12…….
- 0, 5, 10, 20, 30, 40…….
- 35, 30, 25, 20, 12, 10……

Count forwards and backwards in jumps of 10 from fifty-seven.

Count in 2s, 5s and 10s

Reasoning and Problem Solving

Eva says,
If you count in 5s from any number in the five times table, your numbers will end in 5 or 0

Do you agree with Eva?

Prove it.

Agree.
Each number in the 5 times table does end in a 5 or 0
5, 10, 15, 20, 25, 30, 35, 40, 45, 50.

Always, sometimes, never?

- When counting in 2s from zero the numbers are even.
- When counting in 5s from zero the numbers are even.
- When counting in 10s from zero the numbers are even.

- Always
- Sometimes
- Always

Teddy and Whitney are both counting from zero to twenty.

- Teddy is counting in 2s.
- Whitney is counting in 5s.

Will they say any of the same numbers? What do you notice about your answer?

Yes they will both say 10 and 20

The numbers that are the same are the tens.

Count in 3s

Notes and Guidance

Children count forwards and backwards in 3s from any multiple of 3

Encourage children to look for patterns as they count and use resources such as a number track, a counting stick and concrete representations.

Mathematical Talk

What do you notice?

Are the numbers getting larger or smaller?

Can you spot a pattern?

Varied Fluency

What do you notice about the numbers that are circled? Continue the pattern.

⓪ 1 2 ③ 4 5 ⑥ 7 8 ⑨ 10 11 12 13 14 15 16 17 18
Complete the number sequences.

| 15 |
| 9 |
| 6 |
| 0 |

| 27 |
| 24 |
| 18 |
Sid has 15 stickers. He collects 3 more each day.
Complete the number track to show how many he will have in six days.

| 15 | | | | | | |

White Rose Maths

Count in 3s

Reasoning and Problem Solving

True or False?

I start at 0 and count in 3s
I say the number 14

False.
If I count in 3s I say 3, 6, 9, 12, 15....

Teddy is counting in 2s and Jack is counting in 3s.

Teddy	2	4	6	8
Jack	3	6	9	12
+				

Teddy says,
If we add our numbers together as we count we can make a new number pattern.

What pattern do they make?
What happens if both Teddy and Jack count in 5s and they add them together to make a new pattern?

If Teddy and Jack add their numbers together they will be counting in 5s.

If Teddy and Jack both count in 5s their new pattern would be counting in 10s.

White Rose Maths

Autumn - Block 2

Addition & Subtraction

White Rose Maths

Overview

Small Steps

- Fact families – addition and subtraction bonds to 20
- Check calculations
- Compare number sentences
- Related facts
- Bonds to 100 (tens)
- Add and subtract 1s
- 10 more and 10 less
- Add and subtract 10s
- Add a 2-digit and 1-digit number – crossing ten
- Subtract a 1-digit number from a 2-digit number – crossing ten
- Add two 2-digit numbers – not crossing ten – add ones and add tens
- Add two 2-digit numbers – crossing ten – add ones and add tens
- Subtract a 2-digit number from a 2-digit number – not crossing ten
- Subtract a 2-digit number from a 2-digit number – crossing ten – subtract ones and tens
- Bonds to 100 (tens and ones)
- Add three 1-digit numbers

NC Objectives

Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100.

Add and subtract numbers using concrete objects, pictorial representations, and mentally, including: a two-digit number and ones; a two-digit number and tens; two two-digit numbers; adding three one-digit numbers.

Show that the addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot.

Solve problems with addition and subtraction: using concrete objects and pictorial representations, including those involving numbers, quantities and measures; applying their increasing knowledge of mental and written methods.

Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems.

Fact Families

Notes and Guidance

Children apply their understanding of known addition and subtraction facts within 20 to identify all related facts.
This will include an understanding of the relationship between addition and subtraction, and knowing the purpose of the equals sign, as well as the addition and subtraction signs.
This will be supported with showing the link between representations, such as part-whole models and bar models.

Mathematical Talk

What if we took away the red flowers? What are the parts? What is the whole?

Does it change the answer if we add the blue and red flowers in a different order?

What does each circle represent on the part-whole model?

Varied Fluency

Using concrete apparatus, can you talk about the relationships between the different flowers?
One relationship shown by this part-whole model is $15 + 5 = 20$
Can you write all associated number sentences in the fact family?
Look at the bar model below.
Can you write all of the number sentences in the fact family?
Fact Families

Reasoning and Problem Solving

Here is an incomplete bar model.
The total is greater than 10 but less than 20
What could the numbers be?
How many different combinations can you find?

| 7 and 11 |
| 8 and 12 |
| 9 and 13 |
| 10 and 14 |
| 11 and 15 |
| 12 and 16 |
| 13 and 17 |
| 14 and 18 |
| 15 and 19 |
$8 - 5 = 3$
$8 - 3 = 5$
$8 = 5 - 3$
$3 = 8 - 5$

Laura says, "I think that all of these facts are correct because the numbers are related."
Sam disagrees.
Who is correct? Can you prove it?

Sam is correct because 8 does not equal 5 – 3

Which of the representations are equivalent to the bar model?
$12 = 9 + 3$
There are 9 cars in a car park, 3 cars leave.

$9 - 3 = 12$

-3
The number line, the part-whole model and
$12 = 9 + 3$

Check Calculations

Notes and Guidance

It is essential that children have the opportunity to discuss and share strategies for checking addition and subtraction calculations.

Checking calculations is not restricted to using the inverse. Teachers should discuss using concrete resources, number lines and estimating as part of a wide range of checking strategies.

Mathematical Talk

What resources could you use to check your calculation?

Can you check it in more than one way?

Why do we need to check our calculation?

Varied Fluency

Use concrete objects to check and prove whether the calculations are correct.

$$12 - 4 = 8$$

$$7 + 8 = 15$$

Can you use inverse operations to check $5 + 12 = 17$?

17	
12	5
How many possible inverse calculations are there?

Erin writes this calculation: $18 - 5 = 13$
Which of the following could she use to check her work?

$$13 + 5 \qquad 13 - 5$$

$$18 - 13 \qquad 5 + 13$$

41

Check Calculations

Reasoning and Problem Solving

Eva did the following calculation:

$$12 - 8 = 4$$

She checked it by using the inverse.

She did $12 + 8 = 20$ and said that her first calculation was wrong.

What advice would you give her?

It should have been $8 + 4 = 12$ or $4 + 8 = 12$

Teddy is checking Dora's work but doesn't do an inverse calculation.
These calculations can't be right.

$$24 + 6 = 84$$
$$25 - 23 = 12$$
$$18 - 3 = 21$$

How might he know?

What errors have been made in each calculation?

All of the calculations involve errors:

6 has been added to the tens instead of the ones.

25 and 23 are very close in value and therefore can't result in such a large difference.

18 and 3 have been added instead of subtracted.

White Rose Maths

Compare Number Sentences

Notes and Guidance

Children should be encouraged to examine number sentences to find missing values using structure rather than calculation. Children use numbers within 20 to explore mathematical relationships within the context of familiar numbers. Children should compare similar calculations using greater than, less than and equal to symbols.

Mathematical Talk

What other numbers make the same total?

Do we need to calculate to find the answer?

Do you notice a pattern? What would come next?

Varied Fluency

How can we use the following representation to prove that $5 + 3 = 4 + 4$?
Fill in the circles with either $<$, $>$ or $=$

$$6 + 4 \bigcirc 6 + 5$$
$$6 + 4 \bigcirc 3 + 6$$
$$11 - 4 \bigcirc 12 - 5$$
$$11 - 4 \bigcirc 12 - 4$$

Complete the missing numbers.

$$5 + 3 = 6 + \underline{\hspace{1cm}}$$

$$5 + 3 = \underline{\hspace{1cm}} + 6 = 7 + \underline{\hspace{1cm}}$$

$$\underline{\hspace{1cm}} + 3 = \underline{\hspace{1cm}} + 4 = 5 + 5$$

Compare Number Sentences

Reasoning and Problem Solving

Eva thinks she knows the missing number without calculating the answer.
Can you explain how this could be possible?

17 is two more than 15, so the missing number must be two more than 7

The missing number must be 9

Both missing numbers are less than 10

$$7 + \boxed{} < 7 + \boxed{}$$

How many different possible answers can you find?

Lots of different combinations, the left number has to be smaller than the right.

Possible answers:
1 and 2
1 and 3
1 and 4
1 and 5
1 and 6
1 and 7
1 and 8
1 and 9
Etc.

White Rose Maths

Related Facts

Notes and Guidance

Children should have an understanding of calculations with similar digits. For example, $2 + 5 = 7$, so $20 + 50 = 70$

This involves both addition and subtraction. It is important to highlight the correct vocabulary and help children to notice what is the same and what is different between numbers and calculations.
'Tens' and 'ones' should be used to aid understanding.

Mathematical Talk

What is the same?

What is different?

Varied Fluency

■ I have 3 blue pens and 4 black pens. Together I have 7 pens. Tom has 30 blue pens and 40 black pens. How many does he have in total?

Use concrete apparatus to show your thinking.

■ Complete the part-whole models below:
■ Find the missing numbers in the related facts.

$5 + 4 = 9$ $8 = 3 + 5$ $4 = 10 - 6$

$50 + 40 = \underline{\quad}$ $80 = 30 + \underline{\quad}$ $40 = \underline{\quad} - 60$

45

Related Facts

Reasoning and Problem Solving

Continue the pattern.

$$90 = 100 - 10$$
$$80 = 100 - 20$$
$$70 = 100 - 30$$

What are the similarities and difference between this pattern and the following one?

$$9 = 10 - 1$$
$$8 = 10 - 2$$
$$7 = 10 - 3$$

The digits are the same but the place value changes.

Kim says, "If I know $9 + 1 = 10$, I can work out $90 + \_\_\_ = 100$"

Find the missing number and explain how Kim knows.

10

All the numbers are ten times bigger.

Scott goes to the fruit shop.

One apple costs 6p.
A bag of 10 apples costs 50p.

If he needs 20 apples, what's the cheapest way to buy them?

What would the difference be between buying 20 single apples and 2 bags of 10 apples?

How much does each apple cost if he buys a bag of 10? Explain your answer.

Two bags of 10 costing £1 is cheaper.

The difference between buying 20 single apples and 2 bags of 10 is 20p.

In a bag, each apple costs 5p because $50p \div 10 = 5p$

Bonds to 100 (Tens)

Notes and Guidance

Teachers should focus at this stage on multiples of 10 up to and within 100

Links should be made again between single digit bonds and tens bonds.

Using a 10 frame to represent 100 would be a useful resource to make this link.

Mathematical Talk

What does this represent?

Why is it different to a normal 10 frame?

Varied Fluency

Match the 10 frames to the sentences below:

One hundred equals eighty plus twenty

$100 = 100 + 0$
$40 + 60 = 100$

Fill in the missing numbers

$2 + 6 = 8$ $20 + 60 = \underline{\quad}$

$2\underline{\quad} + \underline{\quad}0 = 80$ $80 = \underline{\quad}0 + 6\underline{\quad}$

Continue the pattern

$90 = 100 - 10$
$80 = 100 - 20$

Can you make up a similar pattern starting with the numbers 60, 30 and 90?

47

Bonds to 100 (Tens)

Reasoning and Problem Solving

Sara thinks there are 10 different number bonds to 90 using multiples of 10

Beth thinks there are only 5

Who is correct?

Can you help the person who is wrong to understand their mistake?

Beth because
0 + 90 is the same as 90 + 0
Sara has repeated her answers the other way round.

Using multiples of 10, how many number bonds are there for the following numbers?

20   30   40   50

What do you notice about the amount of bonds for each number?

If 80 has 5 bonds, predict how many 90 would have.

20 and 30 both have 2.
40 and 50 both have 3.
When the tens digit is odd it has the same number of bonds as the previous tens number. 90 would also have 5.

Squares are worth 10
Triangles are worth 20
Circles are worth 30

Can you complete the grid above so that all horizontal and vertical lines equal 60?

Can children create another pattern on an empty grid where each line equals 60?
How many possible ways are there to solve this?

Solution

Lots of possible solutions available.

Add and Subtract 1s

Notes and Guidance

Children should start seeing the pattern with what happens when we add and subtract 1

This is the step before finding ten more than or ten less than, as bridging beyond a 10 should not be attempted yet.

The pattern should be highlighted also by adding 2 (by adding another one) and then adding 3

Mathematical Talk

What happens when we add 2?

What is the link between adding 1 and adding 2?

What about if we want to add 3?

Varied Fluency

Create sentences based on the picture.

Example
There are 4 children playing in a park. One more child joins them so there will be 5 children playing together.

Continue the pattern

$$22 = 29 - 7$$
$$22 = 28 - 6$$

Can you create an addition pattern by adding in ones and starting at the number 13?

Continue the number tracks below.

31		34		

		45		48

			67	

	13			

Bonds to 100 (Tens)

Reasoning and Problem Solving

True or False?

These four calculations have the same answer.

$1 + 4 + 2$ $4 + 2 + 1$

$2 + 4 + 1$ $4 + 1 + 2$

True, because they all equal 7 and addition is commutative.

These four calculations have the same answer.

$7 - 3 - 2$ $2 - 3 - 7$

$3 - 2 - 7$ $7 - 2 - 3$

False, because subtraction isn't commutative.

Sam's house
Laura's house

Sam lives 5km from school.
Laura lives 4km from school in the same direction.

What is the distance between Sam and Laura's houses?

After travelling to and from school, Sam thinks that he will walk 1km more than Laura. Is he correct?
Explain your answer.

What will be the difference in distance walked after 2 school days?

1km

No, he will walk 2km further. 1km on the way to school and 1km on the way home.

4km

10 More and 10 Less

Notes and Guidance

Teaching needs to focus on the importance of the tens digit. Using a 100 square, explore with the children what happens to the numbers in the columns.

Draw attention to the idea that the tens digit changes while the ones digit remains the same.

Children will need to see how the number changes with concrete materials before moving onto more abstract ideas.

Mathematical Talk

What's the same?

What's different?

Varied Fluency

Continue the number tracks below.

| 10 | 20 | 30 | | | |

| | | | 35 | 45 | 55 | | | |

Using a 100 square, circle the number that is 10 more than 27.
Circle the number that is 10 less than 27
Repeat in different colours for different numbers.
What do you notice?

Using concrete materials, complete the missing boxes.

10 less	Number	10 more
	❙ :	❙❙ :
2	12	22
	❙❙❙ :::.	
	37	

10 More and 10 Less

Reasoning and Problem Solving

SALE

15p   22p   35p   68p

The cost of each piece of fruit is reduced by 10p.

What are the new prices?

Red Apple 5p

Green Apple 12p

Banana 25p

Lemon 58p

Tomas says, "I know that 10 more than 72 is 82 because I only have to look at the tens digit."
Is he correct?
Explain your reasoning.

Molly is counting backwards in 10s.
She says forty-nine, thirty-nine, twenty-nine and then stops.
What numbers comes next and why?

Yes, because when you add ten you aren't adding ones.

19 because you take one ten away from 29

Class 3 gives one of their full packets of crayons away.

How many crayons do they have left?

Explain your reasoning.

43

They will have four full packs left which is four tens, and three crayon which represents three ones.

Add and Subtract 10s

Notes and Guidance

Children should make use of place value to add and subtract 10s from a given number within 100
The key teaching point again is the importance of the tens digit within the given numbers, and children should be encouraged to see the relationship.

For example $64 + 20 = 84$

Mathematical Talk

Which column changes?

Which column stays the same?

Varied Fluency

Continue the number track by adding 20 each time.

23				

Use the place value charts and concrete materials to complete the calculations.

Add 2-digits and 1-digit

Notes and Guidance

Before crossing the 10 with addition, children need to have a strong understanding of place value. The idea that ten ones are the same as one ten is essential here. They need to be able to count to 20 and need to be able to partition two-digit numbers in order to add them. They need to understand the difference between one-digit and two-digit numbers and line them up in columns. In order to progress to using the number line more efficiently, children need to be secure in their number bonds.

Mathematical Talk

Using Base 10, can you partition your numbers?

Can we exchange 10 ones for one ten?

How many ones do we have? How many tens do we have?

Can you draw the Base 10 and show the addition pictorially?

Varied Fluency

$17 + 5 =$
Can you put the larger number in your head and count on the smaller number? Start at 17 and count on 5.

Can we use number bonds to solve the addition more efficiently?

We can partition 5 into 3 and 2 and use this to bridge the 10.

Find the total of 28 and 7

- Partition both the numbers.
- Add together the ones.
- Have we got 10 ones?
- Exchange 10 ones for 1 ten.
- How many ones do we have?
- How many tens do we have?

Add 2-digits and 1-digit

Reasoning and Problem Solving

Always, sometimes, never.

I am thinking of a two-digit number, if I add ones to it, I will only need to change the ones digit.

Explain your answer.

Sometimes, because if your ones total 10 or more you will have to exchange them which will change the tens digit.

Here are three digit cards.

6   7   8
Place the digit cards in the number sentence.

How many different totals can you find?

☐☐ + ☐ =

What is the smallest total?

What is the largest total?

$67 + 8 = 75$
$68 + 7 = 75$
$76 + 8 = 84$
$78 + 6 = 84$
$86 + 7 = 93$
$87 + 6 = 93$

75 is the smallest total.

93 is the largest total.

56

Subtract 1-digit from 2-digits

Notes and Guidance

Just as with addition, children need to have a strong understanding of place value for subtraction. Children need to be able to count to 20 and need to be able to partition two-digit numbers in order to subtract from them. They need to understand the difference between one-digit and two-digit numbers and line them up in columns.
In order to progress to using the number line more efficiently, children need to be secure in their number bonds.

Mathematical Talk

Are we counting backwards or forwards on the number line?

Have we got enough ones to subtract?

Can we exchange a ten for ten ones?

How can we show the takeaway? Can we cross out the cubes?

Varied Fluency

$22 - 7 =$
Can you put the larger number in your head and count back the smaller number? Start at 22 and count back 7.

Can we use number bonds to subtract more efficiently?
We can partition 7 into 5 and 2 and use this to bridge the 10.

Subtract 8 from 24
- Can we take 8 ones away?
- Exchange one ten for ten ones.
- Take away 8 ones.
- Can you write this using the column method?

Subtract 1-digit from 2-digits

Reasoning and Problem Solving

Jack and Eva are solving the subtraction $23 - 9$

Here are their methods:

I put 9 in my head and counted on to 23

Jack

I put 23 in my head and counted back 9

Eva

Who's method is the most efficient?

Can you explain why?

Can you think of another method to solve the subtraction.

Eva's method is most efficient because there are less steps to take. The numbers are quite far apart so Harry's method of finding the difference takes a long time and has more room for error.

Jack is counting back to solve $35 - 7$

He counts

$35, 34, 33, 32, 31, 30, 29$

Is Jack correct?

Explain your answer.

Jack is not correct as he has included 35 when counting back.

This is a common mistake and can be modelled on a number line.

Match the number sentences to the number bonds that make the method more efficient.

$42 - 5$ $42 - 2 - 3$

$42 - 7$ $43 - 3 - 3$

$43 - 8$ $43 - 3 - 5$

$43 - 6$ $42 - 2 - 5$

$42 - 5$ ——— $42 - 2 - 3$
$42 - 7$ \\ / $43 - 3 - 3$
$43 - 7$ ✕ $43 - 3 - 4$
$43 - 6$ / \\ $42 - 2 - 5$

White Rose Maths
Add 2-digit Numbers (1)

Notes and Guidance

This step is an important pre-requisite before children add two-digit numbers with an exchange.
Focus on the language of tens and ones and look at different methods to add the numbers including the column method.
It is important that teachers always show the children to start with the ones when adding using the column method.

Mathematical Talk

Can you partition the number into tens and ones?

Can you count the ones? Can you count the tens?

Can you show your addition by drawing the Base 10 to help?

Can you represent the problem?

Varied Fluency

Find the sum of 34 and 23

$$+ \underline{\qquad}$$

$64 + 12 =$ _____

4 ones $+$ 2 ones $=$ _____

6 tens $+$ 1 ten $=$ _____

_____ tens $+$ _____ ones $=$ _____

Hamza has 41 sweets. Jemima has 55 sweets.

How many sweets do they have altogether?

Add 2-digit Numbers (1)

Reasoning and Problem Solving

Katie has 12 marbles.

Jim has 13 marbles more than Katie.

How many marbles do they have altogether?

Jim has 25 marbles.

Altogether they have 37 marbles.

What digits could go in the boxes?

$$\square\, 2 + \square\, 5 = 87$$

Possible answers:
1 and 7
2 and 6
3 and 5
4 and 4
5 and 3
6 and 2
7 and 1

Interesting discussion could be had around is 1 and 7 different than 7 and 1? Etc.

Add 2-digit Numbers (2)

Notes and Guidance

Children use Base 10 and partitioning to add together 2-digit numbers including an exchange.

They have already seen what happens when there are more than 10 ones and should be confident in exchanging 10 ones for one 10.

Mathematical Talk

What is the value of the digits?
How many ones do we have altogether?
How many tens do we have altogether?
Can we exchange ten ones for one ten?
What is the sum of the numbers?
What is the total?
How many have we got altogether?

Varied Fluency

$64 + 17 = $ _____

4 ones + 7 ones = _____

6 tens + 1 ten = _____

_____ tens + _____ ones = _____

$$\begin{array}{r} 64 \\ + 17 \\ \hline 11 \\ + 70 \\ \hline 81 \end{array}$$

Find the sum of 35 and 26
- Partition both the numbers.
- Add together the ones. Have we got 10 ones?
- Exchange 10 ones for 1 ten.
- How many ones do we have?
- Add together the tens. How many do we have altogether?

Class 3 has 37 pencils.
Class 4 has 43 pencils.

How many pencils do they have altogether?

Add 2-digit Numbers (2)

Reasoning and Problem Solving

Can you create a calculation where there will be an exchange in the ones, and your answer will have two ones and be less than 100?	There are lots of possible solutions. E.g. $33 + 29 = 62$	Find all the possible pairs of numbers that can complete the addition. How do you know you have found all the pairs? What is the same about all the pairs of numbers?	$13 + 29$ $19 + 23$ $14 + 28$ $18 + 24$ $15 + 27$ $17 + 25$ $16 + 26$ All the pairs of ones add up to 12
How many different ways can you solve $19 + 11$? Explain your method to a partner. Use concrete or pictorial resources to help explain your method.	Children might add the ones and then the tens. Children should notice that 1 and 9 are a number bond to 10 which makes the calculation easier to complete mentally.		

Subtract with 2-digits (1)

Notes and Guidance

This step is an important step before children start to look at subtraction where they cross a tens boundary.

Children need to use concrete materials but also draw images of the Base 10 so they can independently solve problems.

Mathematical Talk

Do we need to make both numbers in the subtraction before we take away?

Which number do we need to make? The larger number or the smaller?

What are the numbers worth? Tens or ones?

What happens if we have nothing left in a column? Which number do we write?

Varied Fluency

78 minus 34 = _____

8 ones − 4 ones = _____

7 tens − 3 tens = _____

We have _____ tens and _____ ones.

34 − 13 = _____

$$34$$

$$30 \quad 4$$

$$-10 \quad -3$$

$$20 \quad 1$$
- Partition the number 34.
- Partition 13 and subtract the ones and the tens.
- Place the partitioned number back together.

Subtract 13 from 28
$$\begin{array}{r} 2\ 8 \\ -\ 1\ 3 \\ \hline 1\ 5 \end{array}$$

Subtract with 2-digits (1)

Reasoning and Problem Solving

Jasmine has 33 stickers.

Ollie has 54 stickers.

How many more stickers does Ollie have?

What method did you use to solve the problem?

Here the children are working out the difference.

Children might use subtraction to solve the problem or they might count on to find the difference.

Ollie has 21 more stickers than Jasmine.

Find the missing numbers.

$$
\begin{array}{r}
6\ \square \\
-\ 2\ \square \\
\hline
4\ 2
\end{array}
$$

Is this the only possible solution? Explain your answer.

Make the numbers using Base 10 to help you find your answer.

9 and 7

8 and 6

7 and 5

6 and 4

5 and 3

4 and 2

3 and 1

2 and 0

Subtract with 2-digits (2)

Notes and Guidance

Children use their knowledge that one ten is the same as ten ones to exchange when crossing a ten in subtraction.

Mathematical Talk

Have we got enough ones to take away?

Can we exchange one ten for ten ones?

How many have we got left?

What is the difference between the numbers?

Do we always need to subtract the ones first? Why do we always subtract the ones first?

Which method is the most efficient? Subtraction or counting on to find the difference?

Varied Fluency

Use the number line to subtract 12 from 51

51

Can you subtract the ones first and then the tens?
Can you partition the ones to count back to the next ten and then subtract the tens?

$42 - 15 =$

42
40   2
-10 -5
We can't subtract the ones. Can we partition differently?

42
30   12
-10 -5
20   7
Now we can subtract the ones and then subtract the tens.
$42 - 15 = 27$

Take 16 away from 34
$$\begin{array}{r} {}^{2}\cancel{3}\;{}^{1}4 \\ -\;1\;\;6 \\ \hline 1\;\;8 \end{array}$$

Subtract with 2-digits (2)

Reasoning and Problem Solving

Eva and Whitney are working out some subtractions.

Whitney

I am working out
$74 - 56$

One of my numbers in my question is 15

Eva

Whitney's answer is double Eva's answer.

What could Zoe's subtraction be?

Whitney's answer is 18

Eva's answer is 9

Eva's question could be 15 – 6 or 24 – 15

Find the greatest whole number that can complete each number sentence below.

$$45 - 17 > 14 + \underline{\quad}$$

$$26 + 15 < 60 - \underline{\quad}$$

Explain your answer.

13

18

Bonds to 100 (Tens and Ones)

Notes and Guidance

Here children build on their earlier work of number bonds to 100 with tens and number bonds to 10 and 20

They use their new knowledge of exchange to find number bonds to 100 with tens and ones.

Mathematical Talk

How many more do we need to make 100?

How many tens are in 100?

If I have 35, do I need 7 tens and 5 ones to make 100? Explain why.

Can you make the number using Base 10?
Can you add more Base 10 to the number to make 100?

Varied Fluency

Use a 100 square.

- 40 squares are shaded, how many are not shaded?
- 45 squares are shaded, how many are not shaded?
- 54 squares are shaded, how many are not shaded?

Hamza is making 100 with Base 10
How much more does he need if he has:

-

Children could place their Base 10 on top of a 100 piece to help them calculate.

- 5 tens and 3 ones

- 37

$25 + \_\_\_ = 100$

$\_\_\_ + 69 = 100$

$100 - 84 = \_\_\_$

$100 - \_\_\_ = 11$

67

Bonds to 100 (Tens and Ones)

Reasoning and Problem Solving

Chris has completed the missing number sentence.

$$46 + 64 = 100$$

Is Chris correct?
Explain your answer.

Chris is incorrect. He has seen number bonds to 10 but forgotten that he would need to exchange ten ones for one ten.

Complete the pattern.

$$15 + 85 = 100$$
$$20 + 80 = 100$$
$$25 + 75 = 100$$
$$30 + \underline{\quad} = 100$$
$$\underline{\quad} + \underline{\quad} = 100$$

Can you explain the pattern?

$$30 + 70 = 100$$
$$35 + 65 = 100$$
The first numbers are going up in fives and the second numbers are going down in fives. All of the number sentences are number bonds to 100

Each row and column adds up to 100.

Complete the grid.

45	45	
	35	
15		65

45	45	10
40	35	25
15	20	65

Add Three 1-digit Numbers

Notes and Guidance

Children need to use their knowledge of commutativity to find the most efficient and quick way to add the three one-digit numbers.

They look for number bonds to 10 to help them add more efficiently.

Mathematical Talk

Can we change the order of the numbers to make the calculation easier?

Why are we allowed to change the order of the numbers?

Which two numbers did you add first? Why?

What if you added a different two numbers first, would your answer be the same?

Varied Fluency

Use ten frames and counters to add the numbers $4 + 3 + 6$

Can you add the numbers in a different way to find a number bond to 10?
$4 + 6 = 10$
$10 + 3 = 13$

Find the totals of each row and column.

5	4	2	
3	7	8	
5	7	3	

Use $<, >$ or $=$ to compare the number sentences.

$5 + 4 + 6 \bigcirc 6 + 5 + 4$ $7 + 3 + 8 \bigcirc 7 + 7 + 3$

$9 + 2 + 5 \bigcirc 8 + 3 + 5$ $8 + 4 + 2 \bigcirc 2 + 5 + 8$

Add Three 1-digit Numbers

Reasoning and Problem Solving

Always, sometimes, never

$$odd + odd + odd = odd$$

Use one-digit numbers to test if this is true. E.g.

$$3 + 5 + 7$$

Always, children may recognise that two odds make an even so three odds make an odd.

Which numbers would you add together first in the following number sentences? Why would you add those first?

$$3 + 5 + 7 =$$

$$8 + 2 + 6 =$$

$$4 + 3 + 4 =$$

Is there always an easier order to add three one-digit numbers?

3 and 7 first – number bond to 10

8 and 2 first – number bond to 10

4 and 4 first – double a number.

No, e.g. $5 + 6 + 7$

Take 3 consecutive one-digit numbers, e.g. 4, 5 and 6.

Add them together.

What do you notice?

Choose different groups of 3 consecutive one-digit numbers and see if there is a pattern.

$$1 + 2 + 3 = 6$$
$$2 + 3 + 4 = 9$$
$$3 + 4 + 5 = 12$$
$$4 + 5 + 6 = 15$$
$$5 + 6 + 7 = 18$$
$$6 + 7 + 8 = 21$$
$$7 + 8 + 9 = 24$$

If we order the groups, we can see that the totals go up by 3 each time. This is because we are adding one to each number each time so we are adding 3 extra altogether.

70

White Rose Maths

Money

Overview

Small Steps

- Count money – pence
- Count money – pounds (notes and coins)
- Count money – notes and coins
- Select money
- Make the same amount
- Compare money
- Find the total
- Find the difference
- Find change
- Two-step problems

NC Objectives

Recognise and use symbols for pounds (£) and pence (p); combine amounts to make a particular value.

Find different combinations of coins that equal the same amounts of money.

Solve simple problems in a practical context involving addition and subtraction of money of the same unit, including giving change.

Count Money - Pence

Notes and Guidance

This block introduces the £ and p symbols for the first time.

Children will count in 1p, 2p, 5p and 10p coins. Because of related facts, children can also count in 20p coins.

Children do not convert between pounds and pence, therefore children will not count in 50p coins.

Mathematical Talk

What is different about the coins you have counted?

What do you notice about the totals?

Are silver coins always worth more than copper coins?

What different ways can you count the coins?

Which is the quickest way?

Varied Fluency

Count the money.

= ____ p

= ____ p

= ____ p

____ p =

____ p =

Use <, > or = to compare the money.

◯

◯

◯

Count the money.

= ____ p

= ____ p

Count Money - Pence

Reasoning and Problem Solving

Jamie selects four of these coins.

He can use the coins more than once.

What total could he make?

What is the lowest total?

What is the greatest total?

Example answers:

20p, 10p, 10p and 1p makes 41p.

5p, 5p, 5p and 5p makes 20p.

1p, 20p, 5p and 2p makes 28p.

The lowest total would be 1p, 1p, 1p and 1, makes 4p.

The greatest total would be 20p, 20p, 20p and 20p makes 80p.

Draw coins to make the statements correct.

>

<

For the first one, any answer showing less than 30p on the right is correct. E.g. two 10p coins.

For the second one, any answer showing less than 25p on the left. E.g. three 2p coins.

Count Money - Pounds

Notes and Guidance

Children will continue counting but this time it will be in pounds not pence. The £ symbol will be introduced.
Children must be aware that both coins and notes are used for pounds.
Children will count in £1, £2, £5, £10 and £20s.
In this year group, children work within 100 therefore children will not count in £50s.

Mathematical Talk

Which is the hardest to count? Which is the easiest? Why?

What do you notice about the amounts?

Does it matter which side the equals sign is?

Can you find the total in a different way?

What was your method for counting in 20s?

Varied Fluency

Count the money.

= £____
£____ =

= £____

£____ =

Complete the bar models.

£30

Match the money to the correct total.

£25   £60   £10

Which is the odd one out? Explain why.

75

Count Money - Pounds

Reasoning and Problem Solving

Dan thinks he has £13

Is he correct?
Explain your answer.

No, because three £2 coins make £6

£10 and £6 is equal to £16

He has mistaken his £2 coins for £1 coins.

Explain the mistake.

£2, £4, £6, £7, £8, £10

£7 is the mistake. It is an odd number. The 2 times table are all even.

When counting in £2s, we would say

£2, £4, £6, £8, £10

Count Money – Notes & Coins

Notes and Guidance

In this step, children will build on counting by bringing pounds and pence together.

Decimal notation is not used until KS2 therefore children will write the total using 'and' e.g. £5 and 30p rather than £5.30

Children will not count across £1. They will count the pounds and pence separately before putting them together.

Mathematical Talk

How did you work out the missing amount?

What strategy did you use to count the money?

Explain what to do when the pounds and pence are mixed up.

Varied Fluency

How much money is there altogether?

There is £____ and ____p.

Complete the part-whole model.

What's the same and what's different about the parts?

Fill in the gaps to make the statements correct.
- £10 + £5 + 50p = £_____ and _____p
- £20 + £2 + 10p + 10p + 2p = £_____ and _____p
- £5 + £___ + 50p + 20p + 20p + 1p = £10 and ___p

Count Money – Notes & Coins

Reasoning and Problem Solving

How many ways can you complete the part-whole model by drawing money?

£5 and 20p

Example answers:

Mo has the following coins.

He thinks he has 51p.

Explain his mistake.

Mo thinks the 5p is a 50p coin. He has 6p. Alternatively, he has combined the 5 and 1 from each coin.

Here are some coins and a note.

Ali says, "There is 10p".

Joe says, "There is £10".

Are either of them correct?

Explain why.

No, Ali and Joe have taken the digits 2, 2, 5 and 1 and added them together.

The coins are a mix of pounds and pence so need to be counted separately.

78

Select Money

Notes and Guidance

Children select coins from an amount given to them. They will use these practically, draw them and write the abstract amounts.

They will continue to use both pounds and pence to embed previous learning.

Children are continuing to work on recognising money by selecting the correct coins or notes from a wide range.
Mathematical Talk

Is your answer the same as your partner?

Does it matter if you say pence or pounds first?

Does this change the total?

Can you show this amount in a different way?

Varied Fluency

Circle 56p.

Which does **not** show 50p?

Draw money on the purses to match the amounts.

£21 and 32p   £13 and 40p

Select Money

Reasoning and Problem Solving

Rosie says,

I have 43p in silver coins.

Do you agree?

Explain why.

No, because 3 pence can only be made with copper coins.

Hanna and Ste both claim to have 90p.

Hanna has 3 coins and Ste has 4 coins.

Could they be correct?

Which coins could they have?

Yes, they can because:
Hanna = 50p, 20p, 20p.
Ste = 50p, 20p, 10p, 10p.

Use the money to fill the purses.

You can only use each coin or note once.

Cross them out once you have used them.

£10 and 15p

£5 and 51p

Circle the odd one out.

23p = 20p, 2p, 1p
25p = 20p, 5p
28p = 20p, 8p

Explain your answer.

Example answer:

£10 and 15p

£5 and 51p

28p = 20p, 8p is because if you are using coins there is not an 8p coin. Children may give other answers.

Make the Same Amount

Notes and Guidance

Children explore the different ways of making the same amount. As before, pence coins will not cross into the pounds.

Examples need to be modelled where pounds and pence are together but children need to continue to be encouraged to count the pounds and pence separately.

Mathematical Talk

How is your way different to a partner?

Can you swap a coin/note for others and still make the same amount?

What is the smallest amount of coins you can use to make ____?
How many ways can you make ____?

Varied Fluency

Match the amounts.

Complete the part-whole models.

The Base 10 represents money. What coin is represented by each circle?

Make the Same Amount

Reasoning and Problem Solving

Make 50p three ways using the coins below.

You can use the coins more than once.

Example answers:

20p, 20p, 10p

10p, 10p, 10p, 10p, 5p, 5p

1p (50 times)

How many ways can you make 10p using only copper coins?

Did you use a strategy?

Example answers:

2p, 2p, 2p, 2p, 2p

2p, 2p, 2p, 2p, 1p, 1p
Compare Money

Notes and Guidance

Children compare two different values in either pounds or pence.
Examples may be used with both pounds and pence, but children will only focus on one of these and the other must be the same. E.g. £3 and 10p > £2 and 10p.
Children recap comparing vocabulary such as greater/less than and use the inequality symbols.
Mathematical Talk

Do you notice anything about the amounts you have compared?

What's the same? What's different?

Can you add a value that will go in between the greatest and the least?

Varied Fluency

Circle the box with the greatest amount.

Who has the most? Who has the least? How do you know?

Dora: I have £64

Teddy: I have 64p

Use <, > or = to compare the amounts.

Compare Money

Reasoning and Problem Solving

Anna has three coins in her hand.

Jack says,

> I have more than you because I have a 50 pence coin.

Is he correct?

Explain why.

It depends on the coins Anna has.

Children explore and show e.g.

20p, 20p, 20p > 50p

5p, 2p, 2p < 50p

True or False?

5 copper coins can be worth more than 1 silver coin.

Only true when 5p is the silver coin.

Children should explore different true and false answers.

Four 5 pence coins are worth more than two 10 pence coins.

Do you agree? Explain why.

No, they are equal to each other. They both make 20p.

Find the Total

Notes and Guidance

Children will build on their knowledge of addition to add money including:
- 2-digit and 2-digit
- 2-digit and ones
- 2-digit and tens
- 3-single digits

Children will be encouraged to use different methods to add such as count on, partitioning and regrouping.

Mathematical Talk

Was your method different to a friend?

What is the most efficient method? Why?

Can you write a worded question for a friend?

What was the greatest amount you found?

Varied Fluency

Complete the table.

Pounds	Pence	Total
£4	25p	£____ and ____p
£2		£2 and 40p
	65p	£20 and 65 pence
		£15 and 20p
	55 pence	

Complete the bar models.

7p	5p	9p

|		
£6	£4	£2

Jackson buys bread and milk.

49p   30p

How much does he spend?

Find the Total

Reasoning and Problem Solving

Dan has these coins and notes.

He makes an amount greater than £20 but less than £30

Draw the money he could have used. You can use each coin or note more than once.

How many different ways can you find?

Possible answers:

£20, £20 and £5 makes £25

£10, £5, £5, £2 makes £22

Etc.

Here is a shopping list.

Item	Price
Rubber	20p
Ruler	18p
Pencil	32p
Crayon	27p
Pen	45p
Glue	36p

- I spend exactly 50p. Which two items did I buy?
- I bought two of the same item and it cost me 90p. What was the item?
- Choose two items. How many different amounts can you make?
- What is the closest you can get to 65p.

The ruler and the pencil as 18p and 32p makes 50p.

Two pens as 45p and 45p makes 90p.

Children to explore the totals that can be made by adding two items together.

The rubber and the pen would cost 65p as 20p and 45p make 65p.

Find the Difference

Notes and Guidance

Children expand their knowledge of addition and subtraction strategies by specifically finding the difference between two amounts.

Both counting on and counting back need to be modelled in this step. Children need to discuss which is the most efficient for different questions.

Mathematical Talk

How many more?

What's the difference?

How much less?/How many fewer?

What method did you use to work this out?

Is this different to a partner? How?

Varied Fluency

Work out the difference between a bag of sweets and a bar of chocolate.

	25p	?

45p

How many pounds less does Amee have?

Amee   Zac

Paul has £2 and 15p.
Tony has £2 and 40p.
How much more money does Tony have than Paul?

Find the Difference

Reasoning and Problem Solving

What could Mo have?

Work out the difference between the amounts.

I have 57p.

Whitney

I have 2 silver coins and 1 bronze coin.

Mo

How many different answers can you find?

Example answers:
Mo could have more by:
- 50p, 20p, 1p
- 50p, 20p, 2p

Mo could have the same by:
- 50p, 5p, 2p

Mo could have less by:
- 5p, 5p, 1p
- 20p, 10p, 2p

Jake has 2p.

Jenny has 10p.

Both of them have a 2p coin.

What **other** coins could Jenny have?

4 × 2p
3 × 2p and 2 × 1p
2 × 2p and 4 × 1p
1 × 2p and 6 × 1p
8 × 1p
5p and 2p and 1p
5p and 3 × 1p

Find Change

Notes and Guidance

Children build on their subtraction skills by finding change. They need to identify the amounts from coins given, write the calculations and choose efficient methods.

In this step, children will be introduced to converting £1 to 100p to be able to subtract from £1. This links to their number bond knowledge to 100.

Mathematical Talk

Can you write a calculation for this?

Why is it important to use the £ or p symbol?

What strategy did you use to find the change?
Did you use concrete objects to help?

When would you use this skill?

Varied Fluency

Lola has these coins.

She spends 53p.
What money will she have left? What coins could it be?

Write the calculation to find the change.

32p

___ − ___ = ___

Benji spends 65p in the shop.
He pays with a £1 coin.

How much change will he receive?

Find Change
Reasoning and Problem Solving

I have 20p.

My change is more than 5p but less than 10p.

What could I have bought?

Sweet: 7p

Apples: 18p

Chocolate: 12p

Banana: 4p

Example answers:

Chocolate bar or a sweet and banana.

I paid for my shopping with one coin.

Here is my change.

What could I have paid with and how much would the item have been?

Could have paid with a 20p coin and it would have cost 3p.

Could have paid with a 50p coin and it would have cost 33p.

Could have paid with a £1 coin and it would have cost 83p.

Two-step Problems

Notes and Guidance

Children draw together all of the skills they have used in this block and consolidate their previous addition and subtraction learning.

Scaffolding may need to be given to children to see the different steps.

Bar modelling is really useful to see the parts and wholes, and supports children in choosing the correct calculation.

Mathematical Talk

Here is a one step problem. Can you think of a second step?

Can you write your own two step word problem?

Did you use a concrete or pictorial representation to help you?

Varied Fluency

Rachel has £33 in her money bank, and gets £40 more.
Fill in the bar model and write a calculation to show her total.

| _____ | |
| £40 | |

_____ + _____ = _____

She then buys a top for £25. Complete the bar model and write a calculation to show what she has left.

| _____ | |
| £25 | _____ |

_____ − _____ = _____

Bilal has these coins.

He spends 54p. How much does he have left?

A scarf is £12 and a bag is £25
Emily buys one of each and pays with a £50 note.
How much change will she receive?

Two-step Problems

Reasoning and Problem Solving

Ghost Train: 90p

Emily finds a 20p coin.

She puts it with her other three 20p coins.

Does Emily have enough to ride the ghost train?

Explain why.

No, because she only has 80p.

She would need 10p more.

90p > 80p

Alex has 90 pence.
He bought a rubber for 30 pence and wants to buy a pencil.

Pencil: 70p

The shopkeeper will not sell him the pencil.
Explain why.

90p – 30p = 60p

70p > 60p

He does not have enough money to buy the pencil.

White Rose Maths

Autumn - Block 4

Multiplication & Division

White Rose Maths

Overview

Small Steps

- Recognise equal groups
- Make equal groups
- Add equal groups
- Multiplication sentences using the × symbol
- Multiplication sentences from pictures
- Use arrays
- 2 times-table
- 5 times-table
- 10 times-table

NC Objectives

Recall and use multiplication and division facts for the 2, 5 and 10 times-tables, including recognising odd and even numbers.

Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (×), division (÷) and equals (=) sign.

Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods and multiplication and division facts, including problems in contexts.

Show that the multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot.

Recognise Equal Groups

Notes and Guidance

Children describe equal groups using stem sentences to support them. It is important that children know what groups are equal and which are unequal.
The addition or multiplication symbol is not used within this small step but this language will support them in understanding repeated addition and multiplication.
The examples included, refer to the times tables facts year 2 children need to know.

Mathematical Talk

What does the 2 represent? What does the 3 represent?

What does the 5 represent? What does the 2 represent?

I have X equal groups, with Y in each group. Which image am I describing?
Varied Fluency

Complete the stem sentences.

There are ____ equal groups with ____ in each group.

Complete the sentences.

There are ____ equal groups with ____ in each group.
There are two _____.

Describe the equal groups.

What is the same and what is different in each group?

95

Recognise Equal Groups

Reasoning and Problem Solving
Which group of money is the odd one out?

Explain why.

The bags with 5p in each because the 2ps and 1ps have 4p in each group.

Sort into equal and unequal groups.

Equal Groups	Unequal Groups

Create your own picture to go in each column.

Hearts and dots in unequal groups.

Stars and squares in equal groups.

Spot the mistake.

There are 10 equal groups with 2 in each group. There are ten 2s.

There are 2 equal groups with 10 in each group

There are two 10s.

Make Equal Groups

Notes and Guidance

Children should be able to make equal groups to demonstrate their understanding of the new language.

With the examples provided to the children, it is important that they are exposed to numerals and words, as well as multiple representations.
Mathematical Talk

How else could you represent these in equal groups?

How many ways can you represent this?
How have you grouped your items?

Varied Fluency

The Base 10 shows six equal groups with ten in each group. There are six tens.

How else can you represent these as equal groups?

How many ways can you represent 'four equal groups with three in each group'?

What else do we need to show 'five 3s'?

How else can we show five equal groups with 3 in each group? Compare your answer with a partner.
Make Equal Groups

Reasoning and Problem Solving

Has Eva shown the equal groups correctly?

Draw or use cubes to show what Eva should have done.

Children to draw or make 3 towers with 2 in each tower.

How can you make the groups equal?

Various answers e.g. move one star from right to left box. Any answer that makes them equal.

Match the equal groups together.
Three 5s

Two 10s

Two 3s

Sweets, squares, Two 3s.

Dice, cubes, Three 5s.

Coins, number pieces, Two 10s.

Add Equal Groups

Notes and Guidance

Children start relating equal groups to repeated addition.

At this point children would have added 3 single digits together, therefore they can add any 3 numbers together. If there are more than 3 equal groups, the examples must be limited to 2s, 5s, 10s and 3s.

Mathematical Talk

What do the two 3s represent?

Why are we using the addition symbol?
How else can we show the equal groups?

What is the total?

Varied Fluency

Complete:

There are ____ equal groups with ____ in each group.
There are ____ 3s.
___ + ___ = 6

Complete:

There are ____ equal groups with ____ in each group.
There are three ____s.
___ + ___ + ___ = 12

Complete the table.

	Draw It	Say It	Add It

99

Add Equal Groups

Reasoning and Problem Solving

### True or False?

$5 + 5 = 2 + 2 + 2 + 2 + 2$

Draw an image or use cubes to help you explain your answer.

This is true because they both equal 10 but the groups look different.

Which one does not belong?

Two 5s   Ten

$5 + 5$

What do we need to change to make them all represent the same?

The three 5s do not belong, we would have to take away one five.

The Multiplication Symbol

Notes and Guidance

Children are introduced to the multiplication symbol for the first time. They should link the stem sentences, repeated addition and multiplication together.
They should also be able to interpret mathematical stories and create their own.
The use of concrete resources and pictorial representations is still vital for understanding.

Mathematical Talk

What does the 3 represent? What does the 6 represent?

What does lots of mean?

Does $18 = 3 \times 6$ mean the same?

How is $6 + 6 + 6$ the same as 3×6?

Varied Fluency

Complete the sentences to describe the equal groups.
___ + ___ + ___ = 18

___ × ___ = 18

There are ___ equal groups with ___ in each group.
There are three ___.

Complete the table.

Three 2s	Draw It	Addition	Multiplication
There are 3 equal groups with 2 in each group.			

Complete:

Addition	Multiplication	Story
10 + 10 + 10		
	6 × 5	

101

The Multiplication Symbol

Reasoning and Problem Solving

$3 + 3 + 3 = 3 \times 3$

Is Mo correct? Explain why.

Draw an image to help you.

He is correct because
$3 + 3 + 3 = 9$
and $3 \times 3 = 9$

Use <, > or = to make the statements correct.

3×5	◯	$5 + 5 + 5 + 5$
2×2	◯	$2 + 2$
$4 + 4 + 4$	◯	2×2

$3 \times 5 < 5 + 5 + 5 + 5$
$2 \times 2 = 2 + 2$
$4 + 4 + 4 > 2 \times 2$

Think of a multiplication to complete:

$$6 + 6 + 6 > \underline{\hspace{0.5cm}} \times \underline{\hspace{0.5cm}}$$

Could be:
$6 + 6 + 6 > 2 \times 2$
Any answer where it is less than 18

The total is 12, what could the addition and multiplication be?

$6 + 6$ and 2×6

$3 + 3 + 3 + 3 = 4 \times 3$

$2 + 2 + 2 + 2 + 2 + 2 = 6 \times 2$

$4 + 4 + 4 = 3 \times 4$

White Rose Maths

Multiplication from Pictures

Notes and Guidance

Children will use the multiplication symbol and work out the total from pictures.
They should also be able to interpret a word problem by drawing images to help them solve it.

Coins could be used within this small step too.

Mathematical Talk

What does the 4 represent?

What does the 3 represent?

What does the 12 represent?

Can you think of your own story for $3 \times 4 = 12$?

Varied Fluency

Complete:

____ × ____ = ____

____ lots of 3 = ____

____ multiplied by ____ = 12

Complete:

$\bigcirc$

4 lots of 3 $\bigcirc$

     = $2 \times$ ____

Complete the table.

Picture	Multiplication	Sentence
	$4 \times 10 = 40$	4 lots of 10 is equal to 40
	$35 = 7 \times 5$	
		6 lots of 3 is equal to 18

103

Multiplication from Pictures

Reasoning and Problem Solving

There are three dolls in each basket. There are four baskets. How many dolls are there altogether? Draw an image and write a calculation to represent the problem.	The image could be 4 circles with 3 in each. The calculation $3 \times 4 = 12$
Write a sensible story for the calculation 4×10. Draw an image to illustrate your story.	A possible story could be; there were four tables with ten children on each table; there were four purses with 10p in each purse etc.

2×5
$5 + 5$
5×2

Each calculation could explain the image.

Explain why.

There are 2 groups with 5 people in each group.

There are 5 people in one group and 5 in the other.

There are 5 lots of 2 people.

White Rose Maths

Use Arrays

Notes and Guidance

Children explore arrays to see the commutativity between multiplication facts e.g. $5 \times 2 = 2 \times 5$

The use of the array could be used to help children calculate multiplication statements.

The symbol and language of 'lots of' should be used interchangeably.

Mathematical Talk

Where are the 2 lots of 3?

Where are the 3 lots of 2?

What do you notice?

What can we use to represent the eggs and shells?
Can you draw an image?

Varied Fluency

On the image, find 2×5 and 5×2

Can you represent this array using another object?

Complete the number sentences to describe the arrays.

2×3 and   ___ × ___

___ × ___   and   ___ × ___

Draw an array to show:

$3 \times 5 = 5 \times 3$
2 lots of 10 = 10 lots of 2

Use Arrays

Reasoning and Problem Solving
With 10 cubes, how many arrays can you create?

Once you have created your array complete:

___ × ___ = ___ × ___

$2 \times 5 = 5 \times 2$

$1 \times 10 = 10 \times 1$

Find different ways to solve six lots of three.

Part of the array is hidden.

The total is less than 16

What could the array be?

Count in 3s
3 lots of 3 add 3
lots of 3
5 × 3 add 1 × 3
Etc.

4 × 2
5 × 2
6 × 2
7 × 2
8 × 2

The 2 Times Table

Notes and Guidance

Children should be comfortable with the concept of multiplication so they can apply this to the times tables that they need to be secure with.

Images should be used to encourage children to count in twos as well as number tracks. Resources such as cubes and Numicon are important for children to explore equal groups within the 2 times table.
Mathematical Talk

If 16p is made using 2p coins, how many coins would there be?

How many 2s go into 16?

How can the images of the 5 bicycles help you to solve the problems?

Varied Fluency

Count in 2s to calculate how many eyes there are.

There are ____ eyes in total.

____ × ____ = ____

Complete the number track.

2	4		8		12

14	16	18			24

	38	40	42	44	

How many wheels are there on five bicycles?

If there are 14 wheels, how many bicycles are there?

White Rose Maths

The 2 Times Table

Reasoning and Problem Solving

Fill in the blanks.

$$3 \times \underline{\quad} = 6$$

$$\underline{\quad} \times 2 = 20$$

$$7 \times 2 = \underline{\quad}$$

Thomas says that $10 \times 2 = 22$

Is he correct?

Explain how you know.

No, the answer should be 20 Children could draw an array or a picture to show their answer.

Eva says,

Every number in the 2 times table is even.

Is she correct? Explain your answer.

Yes, because 2 is even, and the 2 times table is going up in 2s. When you add two even numbers the answer is always even.

The 5 Times Table

Notes and Guidance

Children can already count in 5s from any given number. They will also have been exposed to the 2 times table.

This small step is focused on the 5 times table and it is important to include the use of zero. Children should see the = sign at both ends of the calculation to understand what it means.
Mathematical Talk

If there are 30 petals, how many flowers? Can you count in 5s to 30? How many 5s go into 30?

How many 5s go into 35?

What does each symbol mean? Do we need to calculate?

Varied Fluency

◼ How many petals altogether?

Write the calculation.

◼ There are 35 fingers.
How many hands?

___ × 5 = 35

◼ Use <, > or = to make the statements correct.

$2 \times 5 \bigcirc 5 \times 2$

$3 \times 2 \bigcirc 4 \times 5$

$10 \times 5 \bigcirc 5 \times 5$

The 5 Times Table

Reasoning and Problem Solving

Is Mo correct?

Every number in the 5 times table is odd.

Explain your answer.

Mo is incorrect because some of the multiples in the five times table are even, e.g. 10, 20, 30

Tubes of bubbles come in packs of 2 and 5

Lily has 22 tubes of bubbles.

How many of each pack could she have?

How many ways can you do it?

Lily could have 4 packs of 5 and 1 pack of 2, or 11 packs of 2, and 2 packs of 5 and 6 packs of 2

Tommy and Rosie have both drawn bar models to show 7×5

35						
5	5	5	5	5	5	5

35				
7	7	7	7	7

What's the same and what is different about their bar models?

Draw your own bar model to represent 4×5

The answer is the same.
Tommy shows seven lots of 5 whereas Rosie show five lots of 7

Children can choose either way to represent 4×5

110

The 10 Times Table

Notes and Guidance

Children have counted in 10s from any given number. This small step is focused on the 10 times table and it is important to include the use of zero. Children should see the = sign at both ends of the calculation to understand what it means.

Mathematical Talk

What if there were 10 packs of crayons?
If there were 50 crayons altogether, how many packets?
How do you know?

How many tens go into 30? Can you count in 10s to 30?

What does greater than mean?

What does less than mean?

Varied Fluency

How many crayons are there altogether?

 There are ___ crayons altogether.

___ × 10 = ___

Altogether there are 30 bottles, how many walls are there?

 ___ × 10 = 30

Think of a multiplication fact for 10s to go in each box.

111

The 10 Times Table

Reasoning and Problem Solving

On sports day, Tom runs 10 metres, 7 times.

Which of the calculations do not describe the word problem?

$$10 + 7$$

$$7 \times 10$$

$$7 + 7 + 7 + 7 + 7 + 7 + 7$$

$$10 + 10 + 10 + 10 + 10 + 10 + 10$$

Explain why.

10 + 7 is incorrect because he has run 10 metres, 7 times, not 10 metres then 7 metres.

$7 + 7 + 7 + 7 + 7 + 7 + 7$

is incorrect because he doesn't run 7 metres. He runs 10 metres.

Some Base 10 is hidden.

The total is less than 100

What could the calculation be?

___ × 10 = ___

Tim says it could be 10 × 10
Is he correct? Explain your answer.

It could be
$6 \times 10 = 60$
$7 \times 10 = 70$
$8 \times 10 = 80$
$9 \times 10 = 90$

It can't be 10 × 10 because 100 is not less than 100
